

**Automatic Stretch Wrapping**

WATCH VIDEO

# Rotary Ring Wrapping Machine; wrapping configuration according to your needs.

Once the bags are full and have been palletized, the Rotary Ring Wrapper wraps the pallet with plastic film in rotating movements, while the pallet remains in a static position. The top cover application device protects the pallet from humidity and dust and the top press maintains the top cover in place during the wrapping process. The top press further helps to maintain unstable pallets fixed during wrapping.

The result is a stable and well-protected pallet prepared for transport and storage.

THE STRETCH WRAPPER ACHIEVES SPEEDS OF UP TO

**50**

PALLETS/HOUR

PERFECT PREPARATION FOR TRANSPORT

EXCELLENT FINISH

USER-FRIENDLY

EASY ACCESS AND MAINTENANCE

OPTIONS

**ROPING DEVICE**

Excellent film attachment to the pallet.

**TACKLE DEVICE**

For a quick and hassle-free change of the cover film coil.

**ELECTRONIC PRE-STRETCH SYSTEM**

Fully automatic system improving the pre-stretching of the film and avoiding slow mechanical adjustments.

**PNEUMATIC LOAD LIFTING**

Efficient wrapping of palletless loads.
